

FACIAL LAYERS & SUN DAMAGE

How UV radiation affects each skin layer & how to treat it

HEALTHY / TREATED SKIN

SUN-DAMAGED SKIN

SKIN LAYERS — CROSS SECTION

Left = healthy / treated · Right = sun-damaged

HEALTHY

DAMAGED

STRATUM CORNEUM

Surface barrier

EPIDERMIS

Keratinocytes + melanin

DERMAL-EPIDERMAL JUNCTION

Rete ridges

DERMIS

Collagen · elastin · HA

HYPODERMIS

Subcutaneous fat

VASCULAR LAYER

Capillaries

- ☀️ UV thickens & dehydrates the barrier
- ✦ Ceramides + Hyaluronic Acid restore
- ☀️ UV overproduces melanin → dark spots
- ✦ SPF blocks UV · Niacinamide regulates
- ☀️ UV flattens rete ridges, weakens junction
- ✦ Retinoids + Peptides reinforce
- ☀️ UV destroys collagen (MMP activation)
- ✦ Retinol, Vitamin C, Peptides rebuild
- ⚡ RF · Microneedling boost collagen
- ☀️ Fat atrophy → volume loss, sagging
- ⚡ RF, biostimulators & fillers restore volume
- ☀️ Telangiectasias — broken capillaries
- ⚡ Laser / IPL · Vitamin C · Azelaic acid

TREATMENT & DAMAGE LEGEND

UV / Sun damage

The driver of photoaging

Hydration

Hyaluronic acid, ceramides

Professional treatments

Laser · RF · Microneedling

SPF protection

Prevents 80% of visible aging

Active ingredients

Retinol · Vit C · Niacinamide · Peptides

Healthy / treated outcome

Even tone · firm · hydrated
